

## **S. Brideau elected as student representative on the SNEBRN Board**

Sébastien Brideau started a PhD in January of this year at Carleton University under the supervision of Ian Beausoleil-Morrison. His project is on the use of radiant floors as a means of collection of direct solar gains (SNEBRN project 1.1c). For his Master's degree, he worked on PV/T collectors at the University of Waterloo and was a student of the previous network (SBRN). He did his undergraduate degree at the University of New Brunswick. He also has experience in the HVAC industry.

As an SNEBRN student Board member, Sébastien's goal is to bring student concerns and ideas to the Board and to increase cooperation between students in the Network, who will share their expertise and feedback via the network website student area blog.
